Mukogawa Women's University, Nishinomiya 663-8558, Japan

Twenty strains of bacteria and 5 strains of basidiomycetes cultured under aerobic conditions and 9 strains of bacteria cultured under anaerobic conditions demonstrated high lactate dehydrogenase activity. One strain of basidiomycete cultured under aerobic conditions and 7 strains of yeasts cultured under anaerobic conditions demonstrated high curd rennet activity. The pHs cultured under aerobic and anaerobic conditions were between 6.1 and 7.1.

Introduction

It is reported that microorganisms have various physiological activity substances. The substance is related to our health and is contained in our foods. The fermented foods (miso, shoyu, natto, yoghurt and cheese) which contain the substance, are made by microorganisms. Preparation of yoghurt¹⁾ and cheese²⁾, have been used to regular microorganisms such as *Bifidobacterium*, *Lactobacillus*. However, there is no report regarding other microorganisms.

Therefore, we did a screening of lactate dehydrogenase and curd rennet of various microorganisms.

Materials and Methods

Organisms

Sixty-eight strains of bacteria, 34 strains of yeasts, 11 strains of molds and 19 strains of basidiomycetes were used.

Medium and culture conditions

Bacteria were grown in 300ml Erlenmyer flasks with 100ml of the medium (pH 7.0) containing 0.5% meat extract, 0.5% NaCl and

1.0% peptone, at 28°C for 24hr. Lactic bacteria were grown in 300ml Erlenmyer flasks with 100ml of the medium (pH 7.2) containing 0.24% meat extract, 0.5% yeast extract, 0.05% soluble starch, 1.0% protease peptone, 0.4% Na₂HPO₄, 0.05% glucose and 0.44% liver extract, at 37°C for 24hr. Yeasts, molds and basidiomycetes were grown in 300ml Erlenmyer flasks with 100ml of the medium (pH 5.5~6.0) containing 2% malt extract at 28°C for 24hr. Molds and basidiomycetes were grown in the medium at 25°C for 2 weeks. Cultivation was carried out under aerobic conditions on a rotary shaker (100rpm) and under anaerobic conditions. After cultivation, the culture broth was centrifuged (4°C, 20min, 8000rpm) to collect the cells. Molds and basidiomycetes were filtered with mesh. The cells were washed twice with 0.85% NaCl. The cells were stored at -20°C.

Preparation of cell free extract

The cells in 10mM potassium phosphate buffer (pH 7.0) were subjected to sonication with an ultrasonic oscillator (BRANSON, SONIFIER 250) 4 times in 15sec (bacteria, yeasts, molds) and 8~12 times in 15sec (basidiomycetes) below

0~8°C. The undestroyed cells and debris were removed by centrifugation at 15,000rpm for 10min at 4°C. The supernatant solution obtained was used as the cell free extract.

Electrophoresis

Gel electrophoresis of the native enzyme was carried out with 7.5% polyacrylamide gel by the Davis³⁾ method. Twenty micrograms of LDH mixed with 20μl of 10mM potassium phosphate buffer(pH 7.0)or 20μl of cell free extract were electrophoresized at 20mA per gel until the dye front reached the bottom of the gel. After electrophoresis, the gel was stained with enzymatic activity staining mixture containing 0.2M Tris-HCl buffer(pH 8.5), 15mM NAD⁺, 80mM L-lactate, 6.5mM phenazine methosulfate and

12mM nitro blue tetrazolium.

Measurement of curd rennet activity

The reaction mixture contained milk and cell free extract. The cell free extract was replaced by milk in a blank. Incubation was carried out at 28°C for 18hr with a test tube 12mm in diameter. The reaction mixture was observed with a deposit, and pH was measured.

Results and Discussion

Polyacrylamide gel electrophoresis of the native enzyme followed by activity staining of lactate dehydrogenase is shown in Fig. 1. The activity staining of lactate dehydrogenase and curd rennet activities of various microorganisms are summarized in Table 1, 2, 3 and 4.

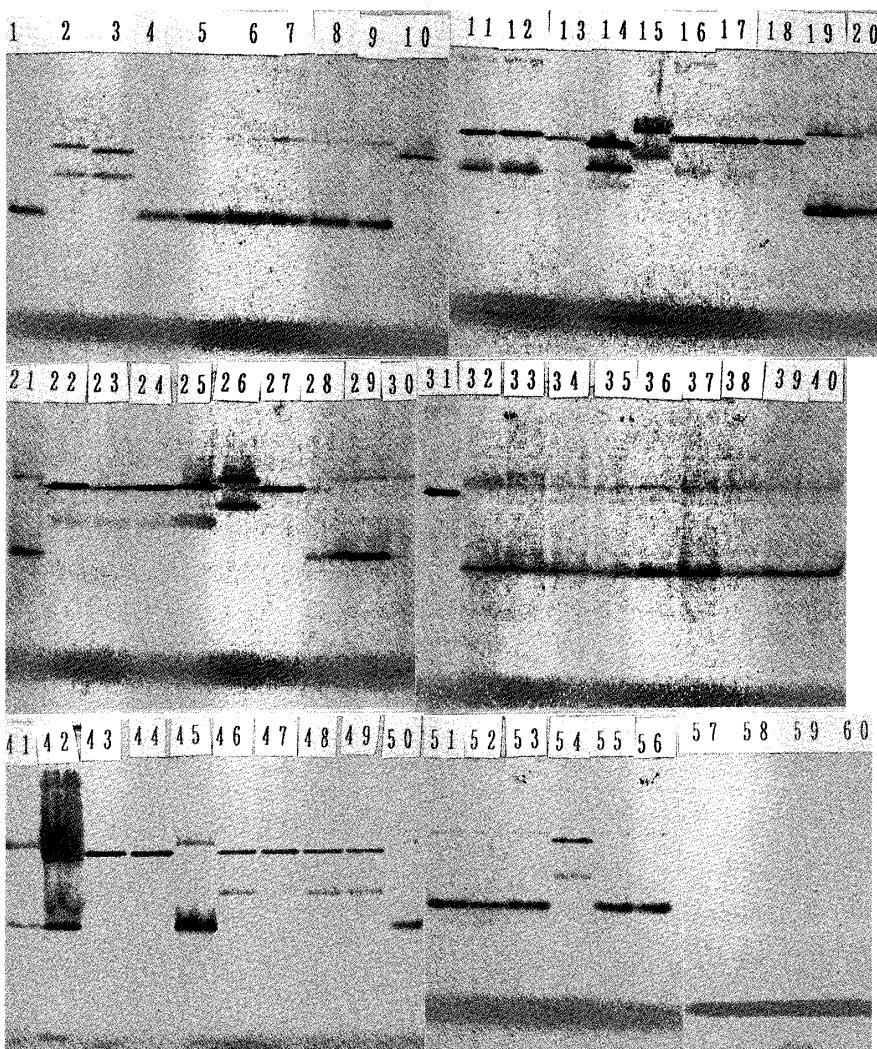

Fig. 1. Activity staining.

Screening of Lactate Dehydrogenase and Curd Rennet of Microorganisms

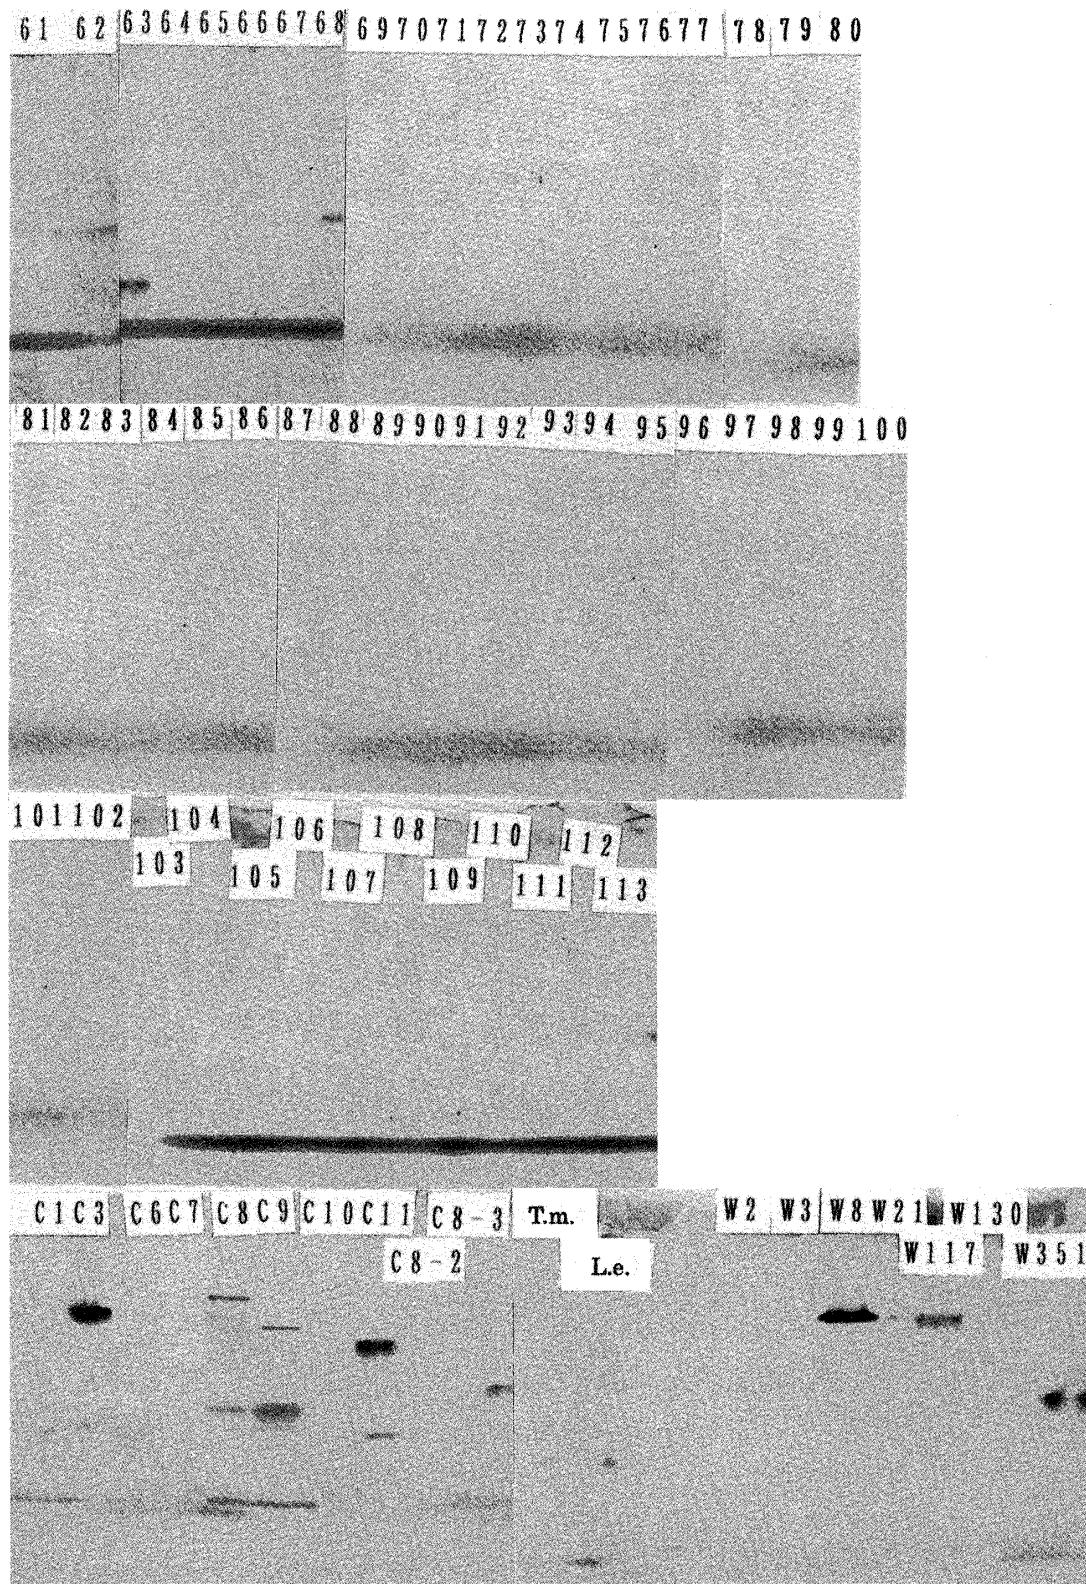

Fig. 1. Activity staining.

The activity staining of lactate dehydrogenase was examined by the method described in Materials and Methods. Number 1~113 and mark of C1~W351 are the same as Table 1.~4.
